Excel Practice Questions – Loyola_TN_CSV_Package

30 Logic-Focused Questions

Students / Demographics / Placement

1. Calculate each student's age on 01-Jul-2025 from DOB.
2. Count students by Program & DegreeType (UG/PG) using a Pivot or COUNTIFS.
3. Flag rows where ScholarshipFlag = 1 AND ParentIncomeBracket = ">10L" (logic check).
4. Create a column: "City, District" (blank if City missing).
5. Rank MentorFaculty by average CGPA of their mentees; list top 3.
6. Find % of students with BacklogCount > 0 in each Department.
7. From placement fields, compute average CTC by Program and Category (OC/BC/…) and show % share.
8. Identify students with CGPA ≥ 8, BacklogCount = 0, Attendance ≥ 90% (overall) – "Honours List".
9. Count how many students are Hostel vs Day Scholar vs Transport in each Program.
10. Create a pass/fail flag per student overall: Passed if no "RA" in any final attempt.

Scores / Exams / Credits

1. For Semester Exams only, compute pass % (FinalMarks ≥ 40 UG / ≥ 50 PG) per Program.
2. Calculate grace-mark impact: average (FinalMarks – RawMarks) where GraceMarks > 0.
3. Find the first ExamDate each student appeared for (minimum date in Scores).
4. Join Scores + Subjects to show CreditPoints beside each Semester Exam row (XLOOKUP/INDEX-MATCH).
5. Build a running count of arrears cleared per student across semesters (cumulative).
6. Identify top 5 subjects with the most arrear attempts (ExamType like "Arrear_Attempt_%").
7. Create a grade distribution (O, A+, A, … RA) for each Semester and Program.
8. Compute CreditsEarned / TotalCredits per semester from credits_semester.csv; highlight <70%.
9. For each student, pick the best attempt mark per subject (Semester or Arrear) and recompute GPA using only those.
10. Count how many subjects each student failed in their first Semester Exam attempt (ignore arrears).

Attendance (Monthly & Summary)

1. From attendance_summary.csv, compute overall Attendance% per student (average of subjects).
2. From attendance_monthly.csv, find the most common shortage reason per month (ties → alphabetical).
3. Identify students with Attendance% < 75% in ≥2 subjects; flag them.
4. Compute average Attendance% by Subject and Semester; spot the 3 lowest-attended subjects.
5. Build a table of TotalClasses vs Attended summed by Month (all students) to see seasonal dips.
6. Correlate Attendance% vs FinalMarks for a key subject (e.g., Data Structures) using CORREL.
7. List students whose attendance improved every month within a semester (monotonic increase).
8. Use NETWORKDAYS.INTL to estimate teaching days per month (given a holiday list) and compare with TotalClasses.

Project / Viva / Extras

1. In viva_split.csv, recompute TotalForViva = Report + Presentation + Q&A; and compare; flag mismatches.
2. In project_panel.csv, extract only the first faculty name from VivaPanelMembers (text parsing).
